

# SECOND-HAND BOOKS MARKETPLACE

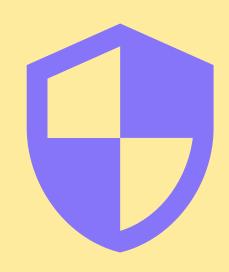

實作 - 第四組

40871114H - 陳安婕

40971231H - 張嫻安

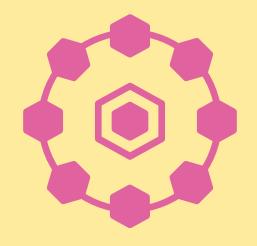

指導老師 - 蔡芸琤

# 動機

### 透明度與安全性

消除了中介機構的需求,降低了欺詐風險

## 多樣性和稀有性

可購買到傳統書店難以找到的稀有和獨特書籍

### 全球連結

跨地區的交流和交易

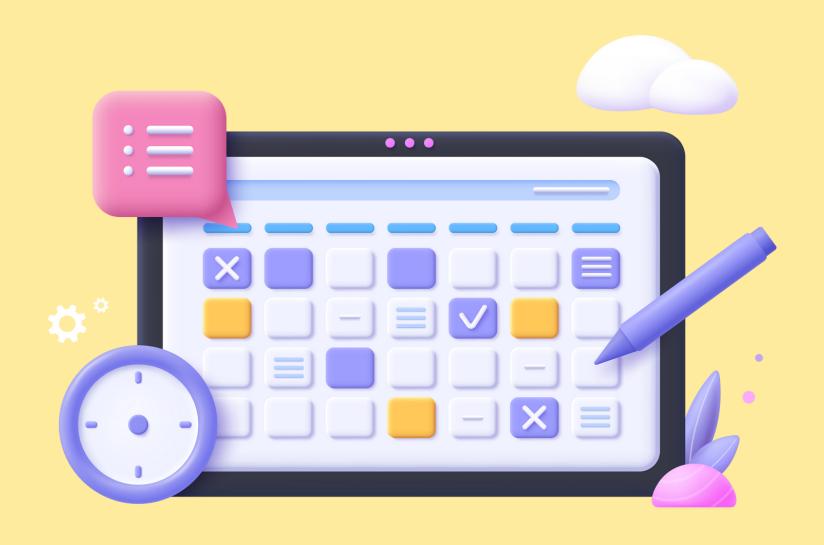

可以實現點對點支付和書籍的分數所有權

# 受眾

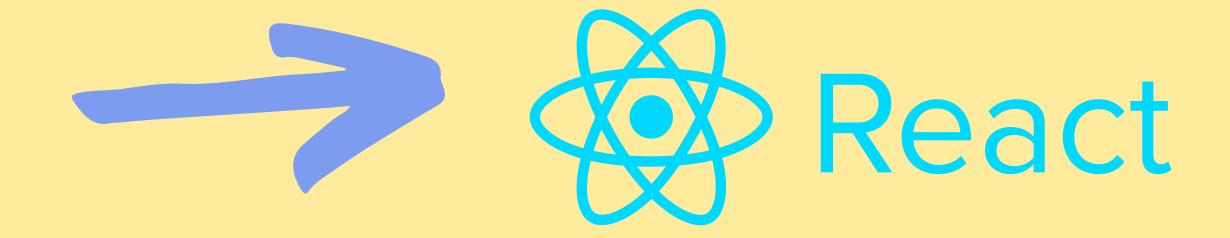

尋求負擔得起、多樣化和可持續的二手書買賣選擇的對象

# 技術

# 技術

## 1. 前端開發

- Marketplace.js 可看到全部NFT的首頁
- Navbar.js 導覽列
- NFTpage.js 單個NFT詳細頁面
- NFTTile.js 整體NFT的排列
- Profile.js 個人資訊
- SellNFT.js 上傳NFT頁面

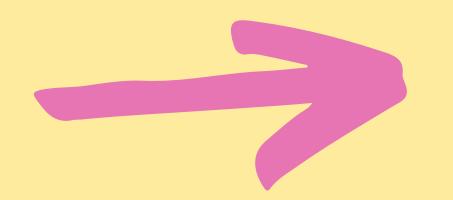

# 技術

## 2. CSS 框架

<button onClick={listNFT} className="font-bold mt-10 w-full bg-orange-500
text-white rounded p-2 shadow-lg" id="list-button">
 Submit
 </button>

3. 區塊鎮與智能合約

通過 Solidity 語言編寫智能合約,這些合約第在以太坊區塊 約率在以太坊區塊 鏈上 (ether.js)

```
contracts/NFTMarketplace.sol(部署合約後會產生Marketplace.json,前端程式要import Marketplace
from '../Marketplace.json';才能調用)
寫了createToken、getAllNFTs、getMyNFTs、executeSale等
舉前端調用executeSale為例: ()
      const provider = new ethers.providers.Web3Provider(window.ethereum);
      const signer = provider.getSigner();
      disableButton();
      updateMessage("Please wait ... Uploading NFT(upto 5 mins)");
      //Pull the deployed contract instance
      let contract = new ethers.Contract(Marketplace.address, Marketplace.abi, signer)
      //massage the params to be sent to the create NFT request
      const price = ethers.utils.parseUnits(formParams.price, 'ether')
      let listingPrice = await contract.getListPrice()
      listingPrice = listingPrice.toString()
      //actually create the NFT
      let transaction = await contract.createToken(metadataURL, price, { value: listingPrice })
      await transaction.wait()
      alert("Successfully listed your NFT!");
```

# THANK YOU!
